

## ASX/MEDIA ANNOUNCEMENT

Tuesday 8 April, 2008

### VTEM Survey for Kempfield and Sunny Corner

Less than a week after listing on the ASX, Argent Minerals Limited (ASX: ARD) has commissioned VTEM surveys over its Kempfield and Sunny Corner tenements to identify additional drilling targets.

Argent has appointed Geotech Airborne Pty Ltd to conduct this unique helicopter-borne magnetic and electromagnetic survey at its properties in the Lachlan Fold Belt of NSW.

According to Argent's Executive Chairman Kerry McHugh, the surveys are due to commence towards the end of April.

"We are pleased to be able to commission the VTEM surveys so soon after listing and to progress our advanced exploration program," Mr McHugh said.

"The aim of the surveys is to produce additional drilling targets to enable us to expand the resources at both properties," he said.

Initial results are expected three weeks after commencement of the VTEM surveys.

Both of Argent's Kempfield and Sunny Corner properties contain Volcanogenic Massive Sulphide style deposits and VTEM surveys over similar style deposits in Western Australia have been very effective in indicating additional mineralisation along strike and at depth.

Geotech will conduct the survey approximately 115 line kilometres over Kempfield and 600 line kilometres over Sunny Corner.

Argent Minerals Limited is a silver, gold and base metals explorer with advanced properties in the highly mineralised and productive Lachlan Fold Belt. The Company successfully listed on the ASX on Thursday 3 April, closing 15% higher following its first day of trading.

The Kempfield property contains JORC resources of 11.3M/oz of silver (3.7m tonnes at 93g/t ag at a 60g/t ag cut-off). The Sunny Corner property was the site of the first major silver mine in Australia.
